

TEAM CLARK

Psychologist and researcher, Kenneth Clark and his wife, Mamie Clark, studied psychology in the 1930s at Howard University and were very involved in the civil rights movement. Together, the Clarks went on to design and conduct a series of experiments commonly known as "the doll test" to study the psychological effects of racial segregation on African-American school children. Their research was cited in arguments during Brown v. the Board of Education, the landmark U.S. Supreme Court case that ruled segregation unconstitutional and sparked a shift historic toward integration.

**TEAM CAPTAIN
ISABELLA MILLER**

My name is Isabella Miller, and I am a sophomore majoring in sociology with a minor in media, journalism, and film. I was born and raised in Hilton Head Island, South Carolina. As a participant in the COAS Flagship Ambassador Program, I am enthusiastic about forging connections with my peers through creative and collaborative initiatives. I am eager to absorb insights from leaders across diverse fields, and I am energized by the program's overarching mission to instill a global perspective in all ambassadors.

I am thrilled to be the captain of my team, Team Clark. We are named after Kenneth Clark, a notable Howard graduate and a change-maker in the world of psychology. Clark's renowned "doll" experiment, where he and his wife Mamie Clark dove into the impacts of segregation, left a lasting legacy and played a pivotal role in the Brown v. Board of Education Supreme Court case. We aspire to emulate Kenneth Clark's contributions by making impactful strides in our respective fields. Given my profound passion for the College of Arts and Sciences, the largest and oldest college on campus, it is a privilege to serve in this capacity.
